DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, 5-14 and 16-17, drawn to directive radio wave systems and devices for traffic, classified in class 342, subclass 454.
 - II. Claims 4 and 15, drawn to data processing for vehicles, navigation and relative location with time regulated operations, classified in class 701, subclass 66.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because in radio communications, a time lapse is not needed to initiate radio communications. The subcombination has separate utility such as either receiving or delivering instructional signals at a particular point in time, or within a set time period, for synchronizing the operation of a transmission with the operation of a secondary mechanism.

Art Unit: 3639

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
